Product Description

https://21831427.fs1.hubspotusercontent-na1.net/hubfs/21831427/Videos/John%20Deere%20Bale%20Fork.mp4 Handling hay bales shouldn’t be a time-consuming and dangerous task. You need a hay fork that simply works and perfectly fits every time. Kerfab’s Tractor Bale Fork is designed to safely handle individual or multiple bales both round and square. The fork frame has been engineered to maximise the visibility of the tine ends and surrounding areas from inside the cab. This, combined with its durability and strength, sets it apart from other hay forks on the market. Kerfab manufacture two styles of tractor bale forks. Manufactured from the same high-quality steel, both the Standard Square Hay Fork and the Larger Hay Fork are built to last on Aussie farms. Unique to Kerfab, their standard style has a curved steel top frame enabling you to carry larger and multiple bales with increased stability and safety. Maximise your capacity with an extendable back frame. Adjustable back frames are available on both styles, with manual or hydraulic options. The Large Hay Fork can extend up to 2.7 meters, allowing you to comfortably handle up to 4 bales simultaneously. Download Information
