Product Description

Versatile. Accessible. Maneuverable. Reliable. The M-Series is about to become the new industry standard for compact manure spreaders. If you're a growing farm that's ready to take the next step in spreading, a lower-acreage farm that's short on storage space, or a large operation that wants versatility, the M-Series may be right for you. Featuring a compact design and low load height, the JBS Mini spreader offers maximum portability, making it perfect for small to medium-sized farm operations. Engineered to be ultra-efficient, it runs with less horsepower than our E-Series and has a uni-body design that allows it to be shipped in many different ways.

- Hydraulic guillotine gate.
- Low horsepower tractor operation 90-130HP.
- UHMW low friction hard-wearing plastic floor.
- 3/8" Grade 100 floor chain.
